Dear Recruiter,

University Communication & Marketing,

University of New Mexico

Perhaps your company is seeking to recruit the talent of someone who enjoys solving technical problems, has strong foundation in high-level programming and can grasp new computer and software technologies. If this is the case then please accept the accompanying resume for your review.

My panache for programming well stands me in good stead. I am well versed with **Dreamviewer** and **Ruby on Rails** which I have used to develop the cross platform website **www.queesser.com**. I have strong understanding of concepts in Data structures and algorithms, experience with working in databases like MySQL, PostgreSQL, Oracle 10g and worked in **HTML, CSS, XML, Java Script, Angular JS, Bootstrap** web technologies to name a few. I am developing few more websites using the frameworks Dreamviewer and RoR which will go live soon.

I am a proactive individual with tremendous creative potential possessing independent thinking and clarity of thought in the tasks that I undertake. I put my heart and soul to get the job accomplished as I am passionate towards what I do. I have an eye for the trending technology and also have a rich experience in programming and finding optimal solutions to difficult problems. I am a person with positive attitude towards life and enjoys my work. And as the cliché goes "All work and no play makes Jack a dull boy", to avoid getting stereotypical I manage my time for the things I love to do such as playing a game of basketball or solving interesting puzzles.

I am currently a graduate student in Computer Science, University of New Mexico (main campus) and Web Developer. Previously I was Senior Software Engineer in Capgemini India Pvt Ltd where I handled mainframes environment required for the development projects.

Being a qualified, hardworking and committed student, I believe I can do a very good job of fulfilling the requirements that this position demands, while being innovative, flexible and resourceful and facing any rigors that this position might pose with ease and poise. I consider this is ideal opportunity to obtain hands-on experience.

Sincerely,

Anandigari Bharath Kumar Reddy
